TfS™ HEMORRHAGE OCCLUDER PIN

Presacral bleeding during pelvic surgery can be difficult to control by conventional methods and may result in massive hemorrhage and death. The HEMORRHAGE OCCLUDER PIN is a simple, well documented solution to this problem.

- Designed to control severe sacral bleeding during pelvic surgery.
- Easily and effectively used when time is critical.
- Serrated shaft to prevent withdrawal and migration.
- Made of medical grade titanium.
- To be used when clamping, suturing and cauterization are ineffective.

Supplied sterile
